DETAILED ACTION

Information Disclosure Statement

1. The references cited in the Search Report dated November 11, 2003 have been considered.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: This application teaches a polyuronic acid derivative comprising glyceryl poly(oxypropylene) triamine and polyuronic acids which are attached by reductively amination, through reducing termini of the polyuronic acids, to the glyceryl poly(oxypropylene) triamine. The glyceryl poly(oxypropylene) triamine is preferable of the formula

wherein the average value of $x + y + z$ is greater than or equal to 10 and less than or equal to 150. The application further teaches a pigment dispersant comprising the polyuronic acid derivative and an aqueous ink composition comprising a pigment, the polyuronic acid derivative and water. The closest prior art of record is U.S. Patent No.

Art Unit: 1755

6,242,529, issued to Marritt et al., which teach a pigment dispersed aqueous ink comprising water, a pigment and a pigment dispersing agent comprising a derivative of a polyuronic acid in which a hydrophobic polymer such as a homopolymer or copolymer prepared from at least one monomer selected from the group consisting of substituted or unsubstituted styrene, substituted or unsubstituted vinyl pyridine, methacrylic acid esters, acrylic acid esters, acrylonitrile, methacrylonitrile, butadiene and isoprene is covalently attached to the reducing terminus of the polyuronic acid but fails to teach or fairly suggest a polyuronic acid derivative comprising glyceryl poly(oxypropylene) triamine and polyuronic acids as claimed by applicants. Accordingly, this application is allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
